Abstract

Capturing information about our research activities as they happen is vital to our ability to document and report our data and findings to the community and NSF. An web site (intranet) has been developed where every CAP-LTER researcher can log in to submit, review and edit his/her personal information, publications, active projects, descriptions of datasets he/she is developing or has published, and annual reports. It will play a central role in project, publication and data tracking in CAP2 as it gives the researcher direct input to what is published in the annual reports and on the CAP website.

Workshops

To introduce the intranet into the CAP routine a series of workshops will be held during the week January 24 through 28 2005.
